macOS / Linux

1) Select the correct Python interpreter in VS Code

1. Open Command Palette: `Cmd+Shift+P`
2. Run: `Python: Select Interpreter`
3. Pick the interpreter for your project (ideally the one inside your virtual environment, e.g., `.../venv/bin/python`).

2) (Optional but recommended) Create and activate a virtual environment

```
# In your project folder
python3 -m venv venv
source venv/bin/activate
```

Verify the prompt shows `(venv)`.

3) Install required packages in that interpreter/env

```
pip install numpy matplotlib scikit-learn
```

4) Verify installs

```
python -m pip show numpy matplotlib scikit-learn
```

5) Test imports

```
python -c "import numpy, matplotlib, sklearn; print('All imports OK!')"
```

6) If warnings persist in VS Code

- Re-run `Python: Select Interpreter` and choose the `venv` path.

- Reload window: `Cmd+Shift+P` → `Developer: Reload Window`.
- Ensure the workspace setting isn't overriding the interpreter:
  - `.vscode/settings.json` should not point to a different Python path.

Windows

1) Select the correct Python interpreter in VS Code

1. Open Command Palette: `Ctrl+Shift+P`
2. Run: `Python: Select Interpreter`
3. Choose your project interpreter (ideally the one in `venv\Scripts\python.exe`).

2) (Optional but recommended) Create and activate a virtual environment

```
# In your project folder (PowerShell)
python -m venv venv
venv\Scripts\activate
```

You should see `(venv)` in the prompt.

3) Install required packages

```
pip install numpy matplotlib scikit-learn
```

4) Verify installs

```
python -m pip show numpy matplotlib scikit-learn
```

5) Test imports

```
python -c "import numpy, matplotlib, sklearn; print('All imports OK!')"
```

6) If warnings persist in VS Code

- Re-run `Python: Select Interpreter` and pick `.\venv\Scripts\python.exe`.
- Reload window: `Ctrl+Shift+P` → `Developer: Reload Window`.
- Check `.vscode\settings.json` for an incorrect `python.defaultInterpreterPath` or `python.pythonPath`.
